Will NMC batteries drive demand for energy storage? The rapid shift towards green energy from traditional energy system is likely to further drive demand for NMC batteries for energy storage in these grids. For instance, according to the US IEA the global renewable capacity is estimated to grow more than 5500GW during - period. How big is the NMC battery market? The U.S. NMC battery market is projected to exceed USD 35.2 billion by , led by federal and state incentives, stricter emission regulations, and the push for energy grid modernization and renewable energy integration. What is the size of the automotive segment in the NMC battery market? How much is the NMC battery market worth in ? The NMC market reached USD 21.9 billion, USD 25.8 billion, and USD 30.5 billion in , and respectively. The nickel manganese cobalt (NMC) battery market has been observing significant growth due to growing demand for efficient batteries from different industrial applications such as EV, ESS and many more. What are base year costs for utility-scale battery energy storage systems? Base year costs for utility-scale battery energy storage systems (BESSs) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Ramasamy et al.,). The bottom-up BESS model accounts for major components, including the LIB pack, the inverter, and the balance of system (BOS) needed for the installation. Which battery chemistry is favored by NMC vs LFP? Owing to the improved heat stability and longer life cycle of batteries NMC batteries are favored significantly. Nickel provides higher performance of batteries but are costlier when compared to LFP. Thus, companies or researchers are developing new chemistries to target cost-sensitive users. For instance, nickel zinc (NiZn) battery chemistry. Will storage futures lead to cost reductions in ? The Storage Futures Study report (Augustine and Blair,) indicates NREL, BloombergNEF (BNEF), and others anticipate the growth of the overall battery industry--across the consumer electronics sector, the transportation sector, and the electric utility sector--will lead to cost reductions in the long term. In this work we describe the development of cost and performance projections for utility-scale lithium-ion battery systems, with a focus on 4-hour duration systems. Storage cost projections are \$152/kWh, \$247/kWh, and \$349/kWh in and \$111/kWh, \$184/kWh, and \$333/kWh in for the low, mid, and high cases respectively. Battery variable operations and maintenance costs, lifetimes, and efficiencies are also discussed, with recommended values selected based The global NMC & NCA Battery market, valued at \$30,170 million in , is projected to grow at a CAGR of 8.3% to reach \$58,546.9 million by .
