Should electrical energy storage systems be used in long-term power auctions? As being generally technology-agnostic, the use of Electrical Energy Storage Systems (EESS) within the long-term power auctions was neither explicitly encouraged nor discouraged. This analysis assumes that the EESS, more specifically the BESS, would be part of a solar PV plant. Is electrical energy storage system use case a source of revenue? An Electrical Energy Storage System use case for the capacity component only exists if a capacity component was awarded in the auctions. Therefore, no revenue can be generated from the results of the auctions due to a lack of awarded capacity bids. However, capacity is a possible source of revenue from the and auctions. How much does a power plant cost per MW? This value is in line with typical market conditions worldwide, where the contracted operation of such services is typically between 150,000 USD and 400,000 USD (3 to 8 million MXN) per MW and year. Can a capacity component be used for electrical energy storage system? These bids included PV plants, wind power plants and geothermal generators. An Electrical Energy Storage System use case for the capacity component only exists if a capacity component was awarded in the auctions. Therefore, no revenue can be generated from the results of the auctions due to a lack of awarded capacity bids. How much power does a battery energy storage system use? A typical Battery Energy Storage Systems in standby only consumes between 0.5 - 2% of its nominal power (e.g., a BESS with a nominal power of 1 MW would have an average auxiliary power consumption of 5 kW - 20 kW) and can be started from the "cold" offline state to the "hot" running state within 5 seconds or less. What is energy trading with mixed revenue? Energy trading with mixed revenue: If the overall generation of the existing PV plant and the new PV plant is below 30 MW, this energy is directly sold to the PML market. If the generation exceeds 30 MW, the surplus energy is stored into the BESS and later sold under favorable PML market conditions.
