How much does electricity cost in Sweden? Source: Swedish Energy Agency. The price of electricity certificates has varied since the system was introduced in Sweden in 1996, reaching its highest point, a little over 350 SEK, in 2000. Since the average monthly price has not been over 180 SEK per certificate. In January 2017, the average price was 1.7 SEK per certificate. Why does Sweden use so much electricity? Most of the electricity use goes into mechanical manufacturing processes. The comparatively high energy use is due to the large number of such companies in Sweden. The mining industry accounted for just over 6 TWh of energy use in 2016. How much electricity is produced in Sweden in 2016? In 2016, electricity production from renewable energy sources and peat within the common electricity certificate system amounted to 53 TWh of which 35 TWh was produced in Sweden. Figure 13 shows how the production of renewable electricity in Sweden has increased between 2000 and 2016 and how production is distributed between different sources of energy. Why are energy costs higher in the north and south of Sweden? Recall that electricity zones 1 and 2, located in the north of Sweden, have lower electricity costs. At the same time, we see that energy intensity tends to be higher in the north than in the south of Sweden, though this is most likely the result of business decisions that also consider issues unrelated to energy costs. How much electricity does Sweden export? In 2016, Swedish net export of electricity amounted to 25 TWh, which is the largest electricity export to date. This is the tenth year in a row that Sweden has net exported electricity and the volumes have increased in recent years. Are Swedish exporting firms more energy intensive? Swedish exporting firms tend to be more energy intensive than Swedish firms in general, and energy intensity tends to be higher for firms that export a larger share of their production. Finally, firms with higher energy costs are associated with lower export values and this is seen across most sectors.
