Can a battery energy storage system complement a PV plant in Mexico? An analysis was carried out to verify if it would be commercially feasible to operate a Battery Energy Storage System (BESS) to complement the operation of a PV plant in the Mexican market. This PV plant would generate a revenue through the contracting via the , or LTAs in Mexico. How much does a power plant cost per MW? This value is in line with typical market conditions worldwide, where the contracted operation of such services is typically between 150,000 USD and 400,000 USD (3 to 8 million MXN) per MW and year. Is electrical energy storage system use case a source of revenue? An Electrical Energy Storage System use case for the capacity component only exists if a capacity component was awarded in the auctions. Therefore, no revenue can be generated from the results of the auctions due to a lack of awarded capacity bids. However, capacity is a possible source of revenue from the and auctions. How much power does a battery energy storage system use? A typical Battery Energy Storage Systems in standby only consumes between 0.5 - 2% of its nominal power (e.g., a BESS with a nominal power of 1 MW would have an average auxiliary power consumption of 5 kW - 20 kW) and can be started from the "cold" offline state to the "hot" running state within 5 seconds or less Can energy storage systems be re-used? As most energy storage systems are coupled through inverters, most best practices from PV and wind power plants can be re-used. Care has to be taken since EESS differ from PV and wind power plants since they do not only export energy, but import energy as well. What is energy trading with mixed revenue? Energy trading with mixed revenue: If the overall generation of the existing PV plant and the new PV plant is below 30 MW, this energy is directly sold to the PML market. If the generation exceeds 30 MW, the surplus energy is stored into the BESS and later sold under favorable PML market conditions. Prices may average around \$0.041 USD per kWh for businesses, compared to global averages of \$0.107 USD per kWh. This rate includes taxes, fees, and other components of the gas bill. The regulatory landscape for energy storage in Mexico is still evolving, with a lack of clear and consistent regulations causing uncertainty for investors and developers. While supportive policies exist, access to financing remains a hurdle for many projects, particularly smaller-scale In , the typical cost of a commercial lithium battery energy storage system, which includes the battery, battery management system (BMS), inverter (PCS), and installation, is in the following range: \$280 - \$580 per kWh (installed cost), though of course this will vary from region to region Average electricity prices for enterprises in Mexico from December to September (in U.S. dollar cents per kilowatt-hour) [Graph].
