How much does cobalt cost in ? For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in to about \$30,000 in . Similarly, the price for lithium carbonate has fallen from a high of approximately \$70,000 per metric ton to well below \$15,000 in . Which battery raw materials have experienced significant price fluctuations over the past 5 years? Battery raw materials like lithium carbonate ( $\text{Li}_2\text{CO}_3$ ), lithium hydroxide (LiOH), nickel (Ni) and cobalt (Co) have experienced significant price fluctuations over the past five years. Figures 1 and 2 show the development of material spot prices between and . What is the difference between lithium ion battery prices and nickel prices? Data until March . Lithium-ion battery prices (including the pack and cell) represent the global volume-weighted average across all sectors. Nickel prices are based on the London Metal Exchange, used here as a proxy for global pricing, although most nickel trade takes place through direct contracts between producers and consumers. What is the price spread of nickel sulfate compared to other raw materials? The data show a price spread of more than 800% for the Li-compounds and almost 300% for cobalt during the time analyzed. During the post-pandemic recovery, nickel sulfate showed a narrower price spread compared to other raw materials. Are NCM batteries a good choice for EVs? This cost advantage makes them a favorable choice for standard- or short-range EVs. In the rapidly evolving EV battery market, specific compositions have taken center stage. In , NCM batteries commanded 58% of the market share, closely followed by LFP and NCA, each holding a 21% share. How are battery cell costs influenced by raw material price fluctuations? In cell production, the active materials are coated onto electrode foils and assembled with the other components in battery cells. The active materials dominate the LIB cell both in terms of their weight share and their cost share. Accordingly, the cell costs are strongly dependent on the discussed raw material price fluctuations. Our estimates give a price level of about 120 USD/kWh for the NMC811 and about 95 USD/kWh for the LFP cell. Regardless of a possible manufacturer's margin, the average prices for EV cells should therefore still be well above the 100 USD/kWh mark.
