Why did electricity prices increase in Ethiopia? It is important to note that the prices for all fuels except electricity increased in Ethiopia over the pre-electricity tariff reform period and that these increases continued as the electricity hikes also began. How much electricity does Ethiopia have? Indeed, Ethiopia's share of the population with access to electricity increased from 13% in 2000 to 48% in 2015, with 36% connected in rural areas and 93% in urban areas, respectively ( Waddams and Pham, 2015 ). How does Ethiopia support electricity access? As part of the package of interventions aimed at supporting electricity access, Ethiopia recently (beginning in 2015) introduced electricity price reforms to improve cost recovery, allow paying for required maintenance, and encourage investment in the sector. What is the energy consumption pattern of households in Ethiopia? Furthermore, the energy consumption pattern of households in Ethiopia is dominated by electricity and biomass fuels. The former is mainly used for lighting and cooking by urban households. However, biomass fuels such as firewood and charcoal are also used for cooking and baking in urban Ethiopia. Does a revised electricity tariff affect urban households' electricity consumption? The price of electricity in Ethiopia was until recently among the lowest in the world. The utility company increased the electricity tariff with the aim of improving the quality of electricity services. This paper studies the effect of the revised tariff on urban households' electricity consumption. The study result shows a highly inelastic demand. Do households use generators for backup power in Ethiopia? Note that residential customers in Ethiopia rarely use generators for backup power. There were insufficient users of LPG and we cannot generate a similar graph for that fuel. As described in Hassen et al. (2015), households use different measures to cope with increases in tariffs.
