NREL analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. This work has grown to include cost models for solar-plus-storage systems. NREL's PV cost benchmarking work uses a bottom-up $\text{Annual Revenue} = \text{Annual Production Capacity (in Watts)} \times \text{Average Selling Price per Watt}$. For a 50 MW (50,000,000 W) line operating at 85% efficiency, the annual output would be 42,500,000 Watts. If the average selling price for locally produced modules is USD 0.28 per Watt, the projected annual revenue would be approximately \$11.9 million. In general, se puede esperar que el precio de un panel solar en Bolivia oscile entre 500 y \$1,000 dólares americanos por cada kilovatio de potencia instalada. Tener en cuenta que este rango de precios es solo una estimación y puede variar según el proveedor y las condiciones del mercado. Además, es importante considerar el costo de almacenamiento de energía solar.
