How much will sodium ion batteries cost in 2025? Assuming a similar capex cost to Li-ion-based battery energy storage systems (BESS) at \$300/kWh, sodium-ion batteries' 57% improvement rate will see them increasingly more affordable than Li-ion cells, reaching around \$10/kWh by 2030. Will sodium-ion batteries dominate the future of long-duration energy storage? With costs fast declining, sodium-ion batteries look set to dominate the future of long-duration energy storage, finds AI-based analysis that predicts technological breakthroughs based on global patent data. Sodium-ion batteries' rapid development could see long-duration energy storage (LDES) enter mainstream use as early as 2025. Are sodium ion batteries a good investment? Analysing 30 LDES technologies, the research found sodium-ion batteries to hold the most promise due to their fast improvement rate - around 57% in 2025. They offer more efficiency in round-trip energy use, greater operational flexibility and lose less energy during storage and supply. How much does a sodium ion cell cost in 2025? The average cost for sodium-ion cells in 2025 is \$87 per kilowatt-hour (kWh), marginally cheaper than lithium-ion cells at \$89/kWh. Will sodium battery technology be a competitive solution for LDEs by 2030? Sodium battery technology is experiencing similar improvements in areas such as energy density as lithium-ion (Li-ion) batteries did two decades ago. The associated cost reductions will mean the emergent technology is set to become a competitive solution for LDES by 2030 at the latest, finds the research.
