Brazil cemented its position as Latin America's solar leader, ranking as the world's fourth-largest solar market in 2023 with 18.9 GW of new installations. While growth is projected to be modest (19.2 GW), the long-term outlook remains robust, with conservative estimates pointing to 90 GW and aggressive ones to 120 GW by 2030. The methodology will still be disclosed, but it is expected to be a combination between the lowest fixed price offered and the Remaining Capacity of the SIN for Generation Flow at the project's busbar. According to PDE 20341, the need for additional supply to meet the power requirement begins in 2030.

Brazil's energy storage market remains a marginal one with an estimated capacity of 250MWh, comprising primarily of rural and rooftop installations (ETN,). Solar PV-based distributed generation represents an attractive growth opportunity for the storage market. In 2023, the predominantly utility-scale Energy storage systems (ESS) are critical for balancing energy supply and demand, enhancing grid stability, and enabling the integration of renewable energy sources such as solar and wind. These systems cater to residential, commercial, and industrial applications, as well as utility-scale.
