elopment of Zambia's electricity mix. While Zambia has the potential to generate 2,300 MW of solar and 3,000 MW of wind, only 76 MW of solar has been installed and no wind power to date. And while 67 percent of the urban population has access to energy, the country trades energy with foreign. The Zambian government has set a target to increase its installed solar and wind capacity to 600 MW by 2030. However, the current installed capacity for solar photovoltaics is only 90 MWp, indicating significant underutilisation of Zambia's potential in the renewable energy sector. As the market is still emerging, with prices dropping 89% since 2015 (BloombergNEF), lithium-ion dominates Zambia energy storage quotations. A 1MW/4MWh system now costs ~\$550,000--cheaper than building a new coal plant! Pro tip: Pair with Zambia's abundant solar for maximum ROI. Need 12+ hours of storage? Vanadium flow batteries.
