What is a flow battery? At their heart, flow batteries are electrochemical systems that store power in liquid solutions contained within external tanks. This design differs significantly from solid-state batteries, such as lithium-ion variants, where energy is enclosed within the battery unit itself. Are flow batteries worth it? While this might appear steep at first, over time, flow batteries can deliver value due to their longevity and scalability. Operational expenditures (OPEX), on the other hand, are ongoing costs associated with the use of the battery. This includes maintenance, replacement parts, and energy costs for operation. Are flow batteries a good energy storage solution? Let's look at some key aspects that make flow batteries an attractive energy storage solution: Scalability: As mentioned earlier, increasing the volume of electrolytes can scale up energy capacity. Durability: Due to low wear and tear, flow batteries can sustain multiple cycles over many years without significant efficiency loss. Are flow batteries a cost-effective choice? However, the key to unlocking the potential of flow batteries lies in understanding their unique cost structure and capitalizing on their distinctive strengths. It's clear that the cost per kWh of flow batteries may seem high at first glance. Yet, their long lifespan and scalability make them a cost-effective choice in the long run. How long do flow batteries last? Flow batteries also boast impressive longevity. In ideal conditions, they can withstand many years of use with minimal degradation, allowing for up to 20,000 cycles. This fact is especially significant, as it can directly affect the total cost of energy storage, bringing down the cost per kWh over the battery's lifespan. Do flow batteries reduce OPEX? This includes maintenance, replacement parts, and energy costs for operation. Flow batteries, with their inherent advantageous design, have less stringent temperature and cycling requirements, potentially reducing OPEX compared to other technologies. A critical determining factor in the cost per kWh of flow batteries is the system's lifespan. ?EUR 250 per kWh capacity of the battery ?Maximum EUR 3,200 per system ?Maximum 35% of the total cost could be covered ?The total investment cost is the sum of: 1. Purchase price incl. VAT of the storage system. 2. The cost of the battery inverter. Subsidies With various programs, such as VLIF and EP+, companies can receive up to 40% subsidy for investments in battery storage systems.
