Is solar PV a good investment in ?Despite inflation, declining module and inverter costs reduced project expenses, rare in the power sector. Solar PV with BESS offers lucrative revenue prospects. Dublin, June 19, (GLOBE NEWSWIRE) -- The "Solar PV Industry, Global, -" report has been added to ResearchAndMarkets 's offering. Does solar PV offer lucrative revenue prospects?Solar PV with BESS offers lucrative revenue prospects. Dublin, June 19, (GLOBE NEWSWIRE) -- The "Solar PV Industry, Global, -" report has been added to ResearchAndMarkets 's offering. Solar PV accounted for 45% of all power generation investment in , and is forecast to maintain this throughout the next decade. What is a solar PV revenue forecast?The revenue forecast reflects annual CAPEX and is accrued to the year the solar PV asset becomes operational. The CAPEX includes PV modules, inverters, balance-of-system costs, installation, and commissioning costs (these apply to larger commercial and industrial and grid-scale projects). Are solar PV projects an asset?Analyst Perspective: The electricity produced from Solar PV projects is an asset. When combined with other DER such as BESS and EV Chargers it can generate additional revenues for the asset owners - or it can mitigate potential demand charges or high electricity bills. Why should you invest in solar PV?Residential, commercial, and industrial customers are increasingly investing in solar PV as a way to reduce electricity bills as the payback becomes more attractive. When combined with battery energy storage systems (BESS), solar PV can provide system owners with additional revenue opportunities. Are tax credits reducing solar PV project costs?Analyst Perspective: For project developers, the declining module process are enabling them to bring down projects costs, thus making solar PV more competitive. Tax credits in the United States are partially countering this, because top quality developers need to prove they are using locally sourced materials which have a higher cost.
