How res-based electricity generation plant will be supported in Peru? A depreciation regime for the income tax is the only support which is presently provided to the RES-based electricity generation plant in Peru. In case adequate incentive policies would be provided, the COE of the proposed system will be notably reduced which will aid the mentioned communities to install the proposed systems. How can the Peruvian authority help res-based electricity generation in rural areas? The Peruvian authority can play a notable role in facilitating the utilization of such technologies in the rural areas. A depreciation regime for the income tax is the only support which is presently provided to the RES-based electricity generation plant in Peru. Is hybrid energy a viable alternative to electricity in developing countries? The majority of rural communities in developing countries (such as Peru) are not connected to the electrical grid. Hybrid energy production from available renewable resources (e.g., wind and solar) and diesel engines is considered as an economically viable and environmentally friendly alternative for electrification in these areas. Do stand-alone electricity generation systems work in different climatic areas of Peru? Techno-economic performance of stand-alone electricity generation systems for off-grid communities located in different climatic areas of Peru was investigated. Seven scenarios, including different combinations of diesel generators, wind turbine units, and solar panels, were assessed. What is hybrid optimization model for electric renewables (Homer) software? Several works have utilized hybrid optimization model for electric renewables (HOMER) software to perform techno-economic feasibility study, sensitivity analysis, and optimization (Singh and Baredar) on hybrid micro-grids (Dekker et al.).
