Do battery storage systems need a permit in Germany? In Germany, in most cases, neither environmental nor energy industry permits are required for battery storage system alone, though it must comply with the regulation on electromagnetic fields (26. BImSchV). Battery storage systems must be registered in the market master database (Marktstammdatenregister). Is solar power a job creator in Germany? As of January 5th 2024, photovoltaics are an economic driver in Germany with approx. EUR30 billion turnover in solar power as a job creator in Germany. Already over 100,000 jobs in the solar sector in Germany. Photovoltaic expansion in Germany surpassed target in but reaching European market capacity. How do energy storage systems benefit from the connection privilege? Energy storage systems benefit from the connection privilege for RES plants to the public grid. Electricity stored in a storage system qualifies for the feed-in premium (Marktprämie), which is granted to the plant operator under the Renewables Act (EEG) once the electricity is fed into the public grid. How does a storage system affect electricity consumption? As a consequence, the electricity stored into the storage system is subject to several levies and taxes which are imposed on the consumption of electricity. Since the final recipient of the electricity, which has been fed from the storage system into the grid, is also a consumer, it has to pay the same levies and taxes again. Are storage systems a stand-alone solution? In international projects storage systems are part of stand-alone solutions or help to improve the stability of larger transport and distribution grids. The German market however is specific, as the German electricity grid is one of the most stable grids in the world and stand-alone solutions are rare. The calculation model uses hourly resolved real data of German electricity generation from the years 2010 to 2020 to determine the required storage capacities. The electricity generation costs used range between 0.02 and 0.10 EUR/kWh. The costs for the considered energy storages are calculated. Purchasing and installing a commercial energy storage system can represent an investment of several 100,000 euros. The exact costs of a specific project cannot be generalized in advance. It depends on what exactly is to be implemented and within which scope. The pure acquisition costs of large storage systems are high. This data sheet gives an overview of the German market for solar battery storage systems and e-mobility at the end of 2023. Unless stated otherwise, please use the following citation: German Solar Association (BSW-Solar) (2024): "Statistical data on the German Solar Battery Storage and E-mobility". For private consumers and small businesses, overall energy cost is comprised of a base fee and a so-called "Arbeitspreis" based on energy consumption in EUR/kWh. In addition to the base fee and energy cost, for large-scale energy consumers fees are also based on peak power ("Leistungspreis") and on the battery system. The O&M cost is 2%. The report also identifies two sensitivity scenarios of battery cost projections in 2024 at \$100/kWh and \$125/kWh. In the more expensive scenario in Schleswig-Holstein, costs went
