

Is there a need for energy storage solutions in Italy? Local industry contacts, as well as U.S. sector firms, have also indicated to Post that there is a need for energy storage solutions in Italy. What is the electricity storage capacity procurement mechanism (MACSE)? The Electricity Storage Capacity Procurement Mechanism (in Italian "Meccanismo di Approvvigionamento di Capacità di Stoccaggio Elettrico": MACSE) is a regulatory initiative aimed at fostering the growth of electricity storage capacity in Italy. What is a contract standard of capacity supply of electrical storage? Energy, Networks and the Environment (here on it is the standard to order the necessary equipment or the date on which any the quantity of new storage contracts: it is the contract standard of capacity supply of electrical storage, distinguished by Reference Technology, as per Annex 4. The Contract Under MACSE, newly constructed storage facilities will receive compensation through long-term contracts, offering a premium in EUR/MWh-years. This premium will be determined via competitive auction processes. Under MACSE, newly constructed storage facilities will receive compensation through long-term contracts, offering a premium in EUR/MWh-years. This premium will be determined via competitive auction processes. With the first auctions for procuring new storage capacity in Italy expected in the second quarter of 2021, Aurora Energy Research has analyzed the internal rate of return for projects supported by the Energy Storage Capacity Procurement Mechanism (MACSE) and found that in certain cases expected. Underpinning MACSE, or Meccanismo di Assegnazione Centralizzata per la Sostenibilità Energetica, is an ambitious plan to boost renewable energy integration and support up to 50GWh of energy storage by 2030 - a move to ensure Italy's energy security and sustainability. First up is the lithium-ion. The Italian Ministry of Environment and Energy Security has approved the volume of future energy storage capacity which Italian grid operator Terna has suggested is necessary to keep the lights on by the publication of decree no. 53, of Feb. 27. Terna calculated Italy will need 10 GWh of energy storage. Legislative Decree 210/21 introduced a new mechanism for the procurement of electricity storage capacity ("MACSE"), developed with the aim of integrating renewable energy sources with an efficient level of overgeneration (i.e., when electricity production exceeds demand), based on planned grid capacity. In response to this necessity, Legislative Decree 210/21 (Implementation of EU Directive 2019/944 of the European Parliament and of the Council of June 5, concerning common rules for the internal market in electricity and amending Directive 2009/72/EU, and laying down provisions for the internal market in electricity) aims for renewables to contribute to 40% of gross final energy consumption by 2030 (they currently account for less than 20% of that total), and specifically to make up 65% of electricity consumption by 2030 (they currently account for about 35% of that total). Installations of new renewable energy. REGULATION OF THE ELECTRICITY STORAGE The SdS has a functional relationship with another generation group, but this generation group uses the same primary energy source for the production of electrical energy; MACSE auction: A game changer for Italy's energy market. The eagerly anticipated procurement exercise will offer a stable, predictable premium over 15 years, making it particularly attractive for risk-averse investors. Italy's MACSE auction will reshape the Italian storage market. The stakes are high - it's about

accelerating Italy's renewable energy transition and opening major doors for developers in the electricity market. Announced October 11, , Italy approves 10 GWh quota for first MACSE storage That figure, or slightly less, will be the amount available to developers who participate in the country's first energy storage capacity auction, known as the mercato a termine degli stoccaggi, or MACSE. MACSE: Mechanism for the procurement of electric Bird & Bird has established a task force of professionals in the energy, regulatory and tax sectors to assist clients in assessing the applicability of the new regulations to electricity storage projects. Energy Storage Systems in Italy: a new mechanism for the MACSE will promote the development of new storage capacity, which is functional for effective integration of renewable sources into the system, also in order to reduce Italy Energy Storage Italy will promote investments in utility scale electricity storage to reach at least 70 GWh, and worth over Euro 17 bn, in the next ten years. The new storage capacity will be Energy in Italy: Trends and opportunities | Herbert The energy sector continues to be a cornerstone of Italy's economic and environmental strategy, driving resilience and innovation amidst global market challenges. As the country aligns with European climate Update on Italian BESS investment case & MACSE This has reduced the need for procurement of utility storage capacity mainly in the South, resulting in lower MACSE volume targets. However, Terna still has a substantial procurement target of 50 GWh of storage capacity Italian Capacity Market Auction: MACSE's On 26 th February , Terna held Italy's Capacity Market (CM) auction for the delivery year, assigning 38 GW of derated capacity (CDP) in 1-year contracts and almost Marketwatch: Italy 'most vibrant' European storage Italy forecast to deploy more storage capacity than any other European nation in BW ESS, Emeren, Nuveen, Energy Vault, Octopus & Pacific Green among players to have made moves in Italian market in last year Italy's energy storage market is growing explosively, with According to data released last week by Italian solar energy association Italia Solare, Italy's independent energy storage installations surged in the first half of , with a Navigating The Battery Storage Boom 2.
