

nickel manganese cobalt battery bulk order price comparison

Why are nickel-metal hydride batteries expensive? Nickel-metal hydride batteries exhibit relatively high raw material cost due to large amounts of nickel. These batteries are also subject to commodity price fluctuations of nickel, leading to pack cost of 250 USD/kWh in the worst case. What is the difference between LFP and NMC battery pack prices? LFP battery pack prices are most sensitive to copper, aluminium and lithium hydroxide cost. A quadrupling of all three would increase pack prices by ~35%. In contrast, NMC battery pack prices are most sensitive to the cathode materials, nickel and cobalt. A quadrupling of the cost for both would increase NMC battery pack prices by more than 50%. Why are cobalt prices consolidated? In the weeks following confirmation that the cobalt market will face an additional three months of no exports from the Democratic Republic of Congo (DRC), metal prices have consolidated as participants point to the future for bullish sentiment. What is the premium range for Jinchuan nickel in China? The premium for Jinchuan nickel remained stable at 2,100-2,400 yuan/mt, while the premium range for mainstream electrodeposited nickel in China remained stable at -100-300 yuan/mt this week. Spot trading volume remained low, with weak downstream demand and low purchase willingness.
