Will on-grid distributed generation in Brazil decrease in ? This is particularly noteworthy since the compensation of on-grid distributed generation in Brazil will decrease in due to regulatory changes, inherently increasing the interest in storage systems. Can industrial battery energy storage systems be economically feasible in Brazil? A literature review demonstrated that this paper is a pioneer in demonstrating such a high level of economic feasibility for industrial battery energy storage systems in Brazil. One year of primary data from the industry (historical load demand series) is made available through a GitHub repository so that results can be replicated.

1. Introduction Can a photovoltaic distributed generation system be used in Brazil? Furthermore, the method is applied to an industry located south of MG -- Brazil, where a photovoltaic distributed generation system is already available. Does PV DG dominate the market share in Brazil? It is also noteworthy that PV DG dominates the market share in Brazil with more than 99% of all connections, thereby ensuring high applicability for the analysis. In any case, the analysis of other DG sources is recommended in future work. Despite higher post-COVID demands, optimization ensured only a 9% increase in total cost, demonstrating the balance between investment and net metering benefits. The reference scenario predicts significant growth in MMGD, with accumulated investments of R\$ 116.6 billion and a cumulative installed capacity of 58.8 GW by . The superior scenario projects even higher investments and capacity, while the inferior scenario outlines the minimum expected growth. Solar energy storage in Brazil is expected to attract R\$45 billion (\$7.8 billion) in investments through , according to a study by New Charge. Of this total, R\$14 billion would go to off-grid applications, R\$16 billion to utility-scale systems and R\$15 billion to commercial and industrial (C&I) Energy storage systems (ESS) are critical for balancing energy supply and demand, enhancing grid stability, and enabling the integration of renewable energy sources such as solar and wind.
